Professional Summary

Technical leader with 10+ years of experience spanning engineering onboarding, delivery leadership, and AI-enabled data platform strategy. I've led initiatives across CI/CD pipeline development, cloud training environments, and data observability solutions that improve enterprise data trust and operational resilience. I enjoy working at the intersection of platform engineering, UX, and stakeholder alignment, partnering closely with teams to turn complex ideas into practical, high-impact solutions.

I lead with a servant leadership mindset, focusing on team growth, psychological safety, and building sustainable, high-performing delivery cultures. My technical background includes Git-based development, Azure ecosystems, and applied AI tooling, alongside iOS and web projects that support education and personal growth. I'm especially interested in how AI can improve the way teams build and deliver software, and I actively use it to streamline workflows, accelerate delivery, and improve overall quality.

Skills

Technical & Development: GitHub & Git Workflows, GitHub Actions, CI/CD Pipelines, SDLC, Version Control & Code Reviews, Java, JavaScript, TypeScript, Python, Swift, SwiftUI, React, SQL, Node.js, HTML/CSS, Data Observability, Data Quality Engineering, Machine Learning Integration

Cloud & Platforms: Azure (DevOps, Data & Platform Services), Google Cloud, Oracle Cloud, OpenShift, Visual Studio, GitLab, Databricks, Apache Spark, Enterprise Data Platforms, Figma, Data Observability Tooling, Trello, Wrike

Leadership & Project Management: Agile/Scrum, Strategic Planning, Stakeholder & Cross-Functional Collaboration, Governance & Compliance, Business Continuity Planning

Training & Enablement: Engineering Onboarding & Training, Technical Content Development, Workshop Facilitation, Career Development & Coaching, Presentation & Public Speaking

AI & Engineering Workflows: Microsoft Copilot, GitHub Copilot, Codex, GitLab Copilot, ChatGPT, Apple Foundation Models, ML-Driven Data Insights

Experience

UBS – Associate Director, Tech Data Engineering (Scrum Lead)

November 2025 - Present

- Lead agile delivery and technical strategy for Dobby, an AI-driven data observability platform leveraging knowledge graphs to automate data management, improve trust in data, and reduce platform downtime.
- Serve as Scrum Lead across cross-functional engineering pods, driving sprint execution, backlog prioritization, dependency management, and continuous improvement of agile delivery practices.
- Partner with Product, UX, and Engineering to advance data quality, metadata enrichment, and ML model integration initiatives that improve reliability, discoverability, and usability of enterprise data assets.

- Provide technical direction and people leadership, contributing to solution design, architecture discussions, and technical decision-making across the platform, mentoring engineers, and aligning platform delivery with broader organizational data strategy.
- Apply AI-driven approaches to data observability and engineering workflows, improving automation, platform reliability, and delivery efficiency.

GitHub - Senior Technical Project Manager, Engineering Training & Development (Contract)

Mar 2025 – September 2025

- Lead global engineering onboarding programs providing self-serve labs, live training, and continuous support.
- Automated onboarding prep with GitHub Actions + Python, accelerating new-hire ramp-up.
- Aligned curriculum with quarterly releases in partnership with Product, Design, and SMEs.
- Streamlined onboarding workflows using GitHub Copilot, reducing manual effort and improving documentation consistency.

Kyndryl - Senior Manager, Engineering Management (titled “Delivery Management”)

Sep 2021 – Mar 2025

- Guided distributed engineering teams through CI/CD, Azure DevOps, and cloud modernization initiatives.
- Directed annual performance reviews, salary planning, and professional development for cross-functional teams.
- Implemented governance and business continuity practices that reduced release risk and improved audit readiness.
- Incorporated Microsoft Copilot in Teams to compile and structure year-end performance data, improving reporting consistency and efficiency across management workflows.

Maverick Solutions - Curriculum & Delivery Leadership (multiple roles)

Dec 2016 – Aug 2021

- Directed teams to design and deliver enterprise Oracle Cloud training programs and live environments.
- Introduced workflow automation with LiquidPlanner, Wrike, and Trello, accelerating curriculum updates.
- Managed budgets, contractors, and reporting to ensure on-time, on-budget delivery.
- Collaborated with clients and SMEs to scale subscription services and improve training accuracy.

Apple - Technical Specialist

Aug 2016 – Dec 2016

- Provided customer-facing iOS/macOS troubleshooting, technology education, and empathetic support.

Red Hat - Solution Engineer (Contract)

Jun 2015 - May 2016

- Designed and implemented client solutions using HTML, CSS, MongoDB, Node.js, and REST APIs.

CACI - Systems Programmer

May 2013 – Jun 2015

- Developed and maintained enterprise applications with Java, JavaScript, and SQL while ensuring compliance with government standards.

Personal & Technical Projects

Author Website Platform – React, Vite, MDX, TypeScript, GitHub

- Rebuilt and modernized a legacy author website into a performant, accessible platform with a Markdown-driven content architecture
- Designed for long-term scalability and maintainability, enabling streamlined publishing workflows and easier content management

Grounded: Affirmation App (iOS & Widget) - Swift, SwiftUI, WidgetKit, CloudKit, TestFlight

- Designed, built, and launched a production iOS app with widgets, user-generated content, theming, and cross-device sync
- Managed full product lifecycle from ideation through App Store release and ongoing iteration via TestFlight
- Incorporating AI-driven content generation and personalization workflows to enhance user experience

Family Flashcards (iOS, Pre-Release) - Swift, SwiftUI, SwiftData, JSON

- Designed and built an offline-first iOS learning app with learner profiles, deck library (ABCs, numbers, sight words, math), and guided study mode (“Again / Got It”)
- Managed the full product lifecycle from ideation through pre-release, driving feature development including custom decks, OCR-based import from school materials, and ongoing UX iteration

Friendly Competitions (iOS, Pre-Release) – Swift, SwiftUI, SwiftData

- Designed and built an offline-first iOS app for running casual judging events (e.g., food, drinks, art) with customizable categories, rank-based scoring, and real-time standings
- Developed the end-to-end product experience including guided event creation, multi-mode voting (pass-the-phone and invite code), photo-assisted judging, and shareable results

Education

B.S. Computer Science, University of Mary Washington - 2013

- Departmental Honors | Asian Studies minor | Chi Beta Phi | President, PERL (Women in CS) | Circle K | NSCS
